Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 7/14/2008 has been entered.

***Information Disclosure Statement***

2. The information disclosure statement (IDS) submitted on 7/14/2008 was filed after the mailing date of the Notice of Allowance on 7/1/2008. The submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

**REASON FOR ALLOWANCE**

4. The following is an examiner statement of reason for allowance:

Klask (US 2007/0106928) shows code comprising instructions for receiving non-graphical data of the parameter from the second controller and rendering the GUI object in response to any change to the parameter; independently from the second controller, executing the instructions to receive the non-graphical data of the parameter from the second controller and to render the GUI object in response to any change to

the parameter; writing the rendered GUI object in a frame buffer in the at least one memory; and sending the rendered GUI object from the frame buffer to an output device, wherein the output device displays the GUI to a user.

Scully (US 5,982,399) teach the graphics application 118 signaling the rendered that a drawing sequence has completed in the memory 104 of the computer 100. The graphics application 118 signals to the rendering the drawing sequence has completed by sending an end.sub.-- picture message to it. The graphics application 118 can then either go back to drawing, or go all the way back and reconfigure the renderer with different options. If the graphics application 118 changes any options on a renderer, it must re-establish that renderer and all renderers above it in the renderer stack.

5. The prior art fails to teach or suggest a tablet PC system comprising:  
means for housing one or more objects in an object, said object comprising as ink canvas providing ink functionality, the ink functionality comprising the editing, recognition and detection of ink, wherein the ink canvas object is configured to detect and respond to actions performed by a user using a stylus based input device, wherein the ink comprises information captured from the use of the stylus based input device; means for rendering said one or more objects and means for rendering the ink on top of the one or more objects as claimed in claims 18,37.

The prior art fails to teach or suggest a process comprising the step of:  
housing one or more objects in an object, said object comprising an ink canvas providing ink functionality, wherein the ink canvas object is configured to detect and respond to actions performed by a user using a stylus based input device

whereby the ink comprises information captured from the use of the stylus based input device; one or more objects rendering themselves; and rendering the ink on top of the one or more objects as claimed in claim 22.

The prior art fails to teach or suggest a computer readable medium having a computer executable program stored thereon, the program comprising the step of housing one or more objects in an object, the object comprising an ink object providing ink functionality, the ink functionality comprising editing of ink, wherein the ink canvas object is configured to detect and respond to actions performed by a user using a stylus based input device whereby the ink comprises information captured from the user of the stylus based input device; one or more objects rendering themselves and rendering the ink on top of the one or more objects as claimed in claims 26,35.

The prior art fails to teach or suggest a system comprising means for housing one or more objects in an object, the object comprising an ink canvas object providing ink functionality, the ink functionality comprising editing of ink, wherein the ink canvas object is configured to detect and respond to actions performed by a user using a user input device; means for one or more objects rendering themselves and means for rendering the ink on top of one or more objects as claimed in claims 30,34,36 .

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
